Process / flow

Source

- ../source/applications/worker/worker/WorkerJob.h
- ../source/applications/worker/worker/WorkerJobManager.h
- ../source/applications/worker/worker/WorkerJobManager.cpp
- ../source/applications/worker/service/SimulatorSessionService.cpp
- ../source/applications/worker/api/ApiRouter.cpp

Purpose

- Show the lifecycle from job creation to
- snapshotting, synchronous execution, and
- result retrieval.

Required content

- queued job creation
- snapshot filename assignment
- synchronous run from job snapshot
- state transitions queued -> running -> finished/failed
- terminal result retrieval gate

Accessibility

- A lifecycle diagram that makes the
- worker-job state machine visible to
- maintainers.

Validation

- The diagram must match the current job manager, service, and router behavior.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
