Process / flow

Source

- source/applications/worker/session/SessionManager.cpp
- source/applications/worker/auth/TokenService.cpp
- source/applications/worker/service/SimulatorSessionService.cpp
- source/applications/worker/worker/WorkerJobManager.cpp

Purpose

- Show how a worker session is created,
- scoped, used, and cleaned up conceptually
- during job handling.

Required content

- temp workspace root
- session id and access token generation
- per-session simulator
- per-session workspace
- job snapshot file within that workspace

Accessibility

- A lifecycle diagram that makes the session
- boundary and its workspace explicit.

Validation

- The diagram must reflect the current session creation and storage rules in code.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
