Process / flow

Source

- source/applications/worker/api/ApiRouter.cpp
- source/applications/worker/service/SimulatorSessionService.cpp
- source/applications/worker/auth/TokenService.cpp
- source/applications/mcp/README.md

Purpose

- Show how a session token gates
- authenticated requests and how worker jobs
- are created, polled, run, and finalized.

Required content

- session creation
- bearer token extraction
- authenticated request routing
- job creation, polling, run, and terminal result retrieval

Accessibility

- A sequence diagram or flowchart that makes
- the token-protected request path obvious.

Validation

- The diagram must include the authenticated and unauthenticated branches actually present in the r

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
