Purpose

- Show how the yeast-oriented examples vary
- around one shared architectural core.

Required content

- common core
- metabolic branch
- compartment branch
- stress branch
- lifecycle branch

Accessibility

- A matrix or branching diagram that
- compares the yeast-oriented whole-cell MVP
- variants.

Validation

- The diagram must remain aligned with the actual example class responsibilities and descriptions.

The source block remains the authoritative specification.
The rendered asset is a compact visual summary.
